January 2001

Dear Reader:

In our continuing effort to make the Iowa Department of Public Health science-driven, we want to make Vital Statistics more useful and user-friendly. One way to do that is to focus on trends rather than raw data. Trends help us see the true picture of the health of the population and answer the crucial question: Are we healthier than we were last year, five years ago, 10 years ago?

This report will show, in fact, that to the extent mortality rates are indicators of "healthiness," we *are* healthier in many categories. For instance, the rates of death from heart disease and cancer – the two biggest killers of Iowans and all Americans – declined. The death rate from heart disease fell from 319 to 302 per 100,000 Iowans from 1998 to 1999. The rate of Iowans dying of cancer declined from 224 to 221.

The rate of death from influenza and pneumonia, which kill so many elderly Iowans, also fell – from 47 per 100,000 persons in 1998 to 37 per 100,000 in 1999. And deaths caused by unintentional injury, excluding vehicle crashes, declined from 22 to just under 21. Unfortunately, deaths from crashes rose from 16 per 100,000 in 1998 to 18 in 1999.

Maternal deaths during childbirth fell markedly, from 8 per 100,000 in 1998 to 5 per 100,000 in 1999. Infant deaths declined to a record low of 5.7 per 1,000, compared to 6.5 per 1,000 live births in 1998 and neonatal deaths decreased from 4.5 to a record low of 3.4. The lowest neonatal death rate previously observed was 4 per 1,000 live births in 1997. Fetal deaths declined slightly, from 6 per 1,000 live births in 1998 to 5.9 per 1,000 live births in 1999.

Infant deaths, by the way, are those of children under age one. Neonatal deaths occur within the first 27 days of life and fetal deaths occur when there is no sign of life after delivery.

Overall, 1999 wasn't a bad year for public health in Iowa. Slight rate decreases mean little to the Iowans who died and their families, however. We owe it to them to work hard to eliminate disease at a more rapid pace, and that is among our goals at the Iowa Department of Public Health.

Dr. Stephen Gleason, director

Preface: Trends in 1999 Vital Statistics

This year's publication reflects a continuing effort to report trends, rather than mere raw data. That effort will continue in next year's and subsequent reports with the goal of making the data more useful and user-friendly.

Examples of trends in this report are in Tables 1 through 3, 10, 11, 13, 14, 24, 30, 31, and 35. Table 13, for instance, shows trends for selected cardiovascular disease deaths as a percent of total deaths in the last ten years.

Trends are also plotted on Figures/Charts 1 through 29. For example, Figure 1 shows trends in live births and deaths in the last ten years and Figure 2 shows trends in marriages and dissolutions in the last ten years.

Many trends show improving health in Iowa. However some show areas of concern that need to be monitored closely.

Additional trends in Iowa health indicators are available in the Iowa Health Fact Book as well as in the web-based Iowa Health Indicators Tracking System (IHITS). The Iowa Health Fact Book is a joint publication of the Iowa Department of Public Health (IDPH) and the College of Public Health at the University of Iowa. Links to this document can be found on-line at www.idph.state.ia.us or at the University of Iowa College of Public Health site, www.public-health.uiowa.edu/factbook. Iowa Health Indicators Tracking System can be accessed through the IDPH web site.

44. Unintentional Injury Deaths Ranked by County, 1999.....	115

TECHNICAL NOTES

DEFINITIONS:

Annulment: A court decree voiding a marriage from the beginning. Annulments are included with divorces for rate calculation purposes and are available only by place of occurrence.

Cause of Death: Deaths, by cause, are classified according to the *International Classification of Diseases, Ninth Revision*, adapted for use in the United States. It is the disease or injury that initiated the sequence of morbid events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury. The responsibility for indicating the underlying cause of death is that of the certifying physician or medical examiner.

Congenital Malformation: Deformity existing before birth.

Divorce: A court decree dissolving a marital relationship. Divorces are included with annulments for rate calculation purposes and are available only by place of occurrence.

Fetal Death: A birth which fails to show any sign of life after delivery. Reportable fetal deaths in Iowa are those greater than 20 weeks gestation. The responsibility for determining if a birth meets this definition is that of the attending physician. "Fetal death" and "stillbirth" are synonymous terms.

Infant Death: Death of a liveborn infant under one year of age. Includes both neonatal and postneonatal deaths.

Live Birth: A birth that shows any sign of life after delivery. The World Health Organization considers a sign of life as being the breathing or showing of any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. The responsibility for determining if a birth meets this definition is that of the attending physician. In this publication, the terms "live birth" and "birth" are used synonymously.

Live Birth Order: An expression of the numeric relationship of a child to others liveborn to that mother.

Low Birth Weight: A weight at birth of under 2,500 grams or 5 pounds, 8 ounces.

Marriage: The legal union of individuals. Marriages are available only by place of occurrence.

Maternal Death: A death due to complications of pregnancy, labor, delivery or puerperium.

Neonatal Death: Death of liveborn infant occurring within the first 27 days of life.

Occurrence Data: Data compiled by the geographical place the event occurred without regard to residence.

Other Race: Includes persons stating themselves as other than Black or the categories included in "White."

Perinatal Death: Death of a fetus of greater than 20 weeks gestation or death of a liveborn infant under 28 days of life.

Primary Marriage: Dissolution of a first marriage for both parties.

Postneonatal Death: Death of a liveborn infant after the first 27 days of life, but before one year of age.

Resident Data: Data compiled by the usual place of residence without regard to the geographical place where the event occurred. For births, the mother's usual residence is used as the place of residence of the child.

White Race: Includes persons stating themselves as White, Cuban, Mexican, Puerto Rican, or other Hispanic. Also includes persons for whom race is not stated.

American Indian or Alaska Native: A person having origins in any of the original peoples of North and South America (including Central America), and who maintain tribal affiliation or community attachment.

Asian: A person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent including, for example, Cambodia, China, India, Japan, Korea, Malasia, Pakistan, the Phillipine Islands, Thailand, and Viet Nam.

Black or African American: A person having origins in any of the black racial groups of Africa

Hispanic or Latino: A person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin, regardless of race.

Native Hawaiian or Other Pacific Islander: A person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands.

TIPS ON USING VITAL STATISTICS

This publication serves as an historical recording of the most requested statistics relating to vital events and is a source of information that can be used in further analysis. While many users of vital statistics have a good working knowledge of this subject, others may not fully understand the data limitations. This section discusses items to help the reader in the use of this document.

Quality of the Data: Every precaution is taken to minimize errors in the raw data during its preparation and receipt. The data are from certificates of vital events--births, deaths, marriages, divorces, and annulments.

Each document is edited for consistency and completeness. Queries are initiated to complete or verify information on the certificate. However, the department is not able to change information on certificates without certifier concurrence. Therefore, the quality of the data is often dependent on the decisions of the certifying agent.

Residence or Occurrence: All data contained in this publication are by residence except marriages and divorces.

Total, Rates, or Ratios: Vital events can be reported as totals, rates, or ratios. Totals will suffice as long as the user needs to know how many times a certain event occurred and no relationship or comparison is to be made with other areas or different time periods.

When different areas or time periods are being studied, it may be best to use rates or ratios. Populations vary between areas or over time in the same area. It may be that variations in occurrence result from changes in the population and do not indicate a new trend in the vital event.

Rates or ratios express the occurrence of vital events in relation to a set standard. For example, the crude birth rate is expressed per 1,000 total population; the age-specific birth rate is expressed per 1,000 females in the specific age category. This comparison removes differences between sizes of the age group being compared over time and allows for analysis of changes in vital event patterns.

Small Number Limitations: There are two limitations involving small numbers. One involves a small number of occurrences for a particular vital event. The other limitation is when rates or ratios are calculated for a small population even though the number of occurrences of that event may not be considered small. Caution should be exercised concerning the use of such data. Statistical stability cannot be assured when small numbers are used in some formulas. Determination of what constitutes a small number must be made by the individual user. However, numbers smaller than 16 and populations less than 100 are generally considered unstable for use in most statistical computations.

FORMULAS

NATALITY FORMULAS

$$\text{BIRTH RATE} = \frac{\text{Number of Live Births}}{\text{Estimated Midyear Population}} \times 1,000$$

$$\text{LOW BIRTH WEIGHT RATIO} = \frac{\text{Number of Live Births with Birth Weight Under 2,500 grams}}{\text{Number of Live Births}} \times 1,000$$

$$\text{RATIO OF BIRTHS TO UNMARRIED WOMEN} = \frac{\text{Number of Live Births to Unmarried Women}}{\text{Number of Live Births}} \times 1,000$$

$$\text{AGE - SPECIFIC BIRTH RATE} = \frac{\text{Number of Live Births to Women in Specific Age Group}}{\text{Estimated Female Population in that Age Group}} \times 1,000$$

$$\text{GENERAL FERTILITY RATE} = \frac{\text{Number of Live Births}}{\text{Estimated Female Population 15 - 44 Years of Age}} \times 1,000$$

MARRIAGE FORMULAS

$$\text{MARRIAGE RATE} = \frac{\text{Number of Marriages}}{\text{Estimated Midyear Population}} \times 1,000$$

DIVORCE FORMULAS

$$\text{DIVORCE RATE} = \frac{\text{Number of Divorces and Annulments}}{\text{Estimated Midyear Population}} \times 1,000$$

MORTALITY FORMULAS

$$\text{DEATH RATE} = \frac{\text{Number of Deaths}}{\text{Estimated Midyear Population}} \times 1,000$$

AGE ADJUSTED DEATH RATE * =

$$\left(\frac{\text{Decedents < 1 Year of Age}}{\text{IA Midyear Population < 1 Year of Age}} \times 1940 \text{ U.S. Standard Million Pop. < 1 Year of Age} + \right.$$

$$\frac{\text{Decedents Aged 1 - 4}}{\text{IA Midyear Population Aged 1 - 4}} \times 1940 \text{ U.S. Standard Million Pop. Aged 1 - 4} +$$

$$\frac{\text{Decedents Aged 5 - 14}}{\text{IA Midyear Population Aged 5 - 14}} \times 1940 \text{ U.S. Standard Million Pop. Aged 5 - 14} +$$

$$\frac{\text{Decedents Aged 15 - 24}}{\text{IA Midyear Population Aged 15 - 24}} \times 1940 \text{ U.S. Standard Million Pop. Aged 15 - 24} +$$

$$\frac{\text{Decedents Aged 25 - 34}}{\text{IA Midyear Population Aged 25 - 34}} \times 1940 \text{ U.S. Standard Million Pop. Aged 25 - 34} +$$

$$\frac{\text{Decedents Aged 35 - 44}}{\text{IA Midyear Population Aged 35 - 44}} \times 1940 \text{ U.S. Standard Million Pop. Aged 35 - 44} +$$

$$\frac{\text{Decedents Aged 45 - 54}}{\text{IA Midyear Population Aged 45 - 54}} \times 1940 \text{ U.S. Standard Million Pop. Aged 45 - 54} +$$

$$\frac{\text{Decedents Aged 55 - 64}}{\text{IA Midyear Population Aged 55 - 64}} \times 1940 \text{ U.S. Standard Million Pop. Aged 55 - 64} +$$

$$\frac{\text{Decedents Aged 65 - 74}}{\text{IA Midyear Population Aged 65 - 74}} \times 1940 \text{ U.S. Standard Million Pop. Aged 65 - 74} +$$

$$\frac{\text{Decedents Aged 75 - 84}}{\text{IA Midyear Population Aged 75 - 84}} \times 1940 \text{ U.S. Standard Million Pop. Aged 75 - 84} +$$

$$\frac{\text{Decedents Aged 85 +}}{\text{IA Midyear Population Aged 85 +}} \times 1940 \text{ U.S. Standard Million Pop. Aged 85 + } \left. \right)$$

1940 Total U.S. Standard Million Population X 1,000

*Year 2000 Projected Standard Population May Be Used in the Above Formulas.

$$\text{CAUSE - SPECIFIC DEATH RATE} = \frac{\text{Number of Deaths for Specific Cause}}{\text{Estimated Midyear Population}} \times 100,000$$

$$\text{AGE - SPECIFIC DEATH RATE} = \frac{\text{Number of Deaths for Specific Age Group}}{\text{Estimated Population in that Age Group}} \times 1,000$$

$$\text{INFANT DEATH RATE} = \frac{\text{Number of Deaths <1 Year of Age}}{\text{Number of Live Births}} \times 1,000$$

$$\text{CAUSE SPECIFIC INFANT DEATH RATE} = \frac{\text{Number of Deaths <1 Year for Specific Cause}}{\text{Number of Live Births}} \times 1,000$$

$$\text{NEONATAL DEATH RATE} = \frac{\text{Number of Deaths <28 Days of Age}}{\text{Number of Live Births}} \times 1,000$$

$$\text{POSTNEONATAL DEATH RATE} = \frac{\text{Number of Deaths 28 or More Days, but <1 Year}}{\text{Number of Live Births}} \times 1,000$$

$$\text{PERINATAL DEATH RATE} = \frac{\text{Number of Fetal Deaths 20 or More Weeks of Gestation} + \text{plus Infant Deaths <28 Days of Age}}{\text{Number of Live Births}} \times 1,000$$

(The definition of perinatal mortality varies from state to state. Caution should be exercised in comparing this ratio between states.)

$$\text{FETAL DEATH RATIO} = \frac{\text{Number of Fetal Deaths 20 or more Weeks of Gestation}}{\text{Number of Live Births}} \times 1,000$$

(The definition of a fetal death varies from state to state. Caution should be exercised in comparing this ratio between states.)

$$\text{MATERNAL MORTALITY RATE} = \frac{\text{Number of Deaths due to "Complication of Pregnancy, Childbirth or the Puerperium" (ICD9 630 - 676)}}{\text{Number of Live Births}} \times 100,000$$

VITAL STATISTICS AND THE YEAR 2000 HEALTH OBJECTIVES

As an integral part of *Healthy People 2000*, a national strategy for improving the health of the nation over the next decade, a consensus set of 18 health status indicators was developed to help communities and states in broadly measuring the health status of their populations. Priority in selecting the indicators was given to measures for which data were readily available and were commonly used in public health.

The set of health status indicators was developed by a committee that involved local, state, and federal health officials and representatives from academic institutions and professional associations. The health status indicators are intended to ensure data comparability and facilitate use by public health agencies at all levels of government. In addition, the indicators will focus local, state, and national efforts in tracking achievement of the Year 2000 objectives and will permit valid comparisons of local and state health data with national data.

Iowa has adopted the list of health status indicators. Listed on the following page are the Iowa and national statistics for the baseline year of 1987 along with the Iowa 1999 statistics and the national Year 2000 goal for each of the 18 health status indicators. Three indicators represent special cases—childhood poverty, air quality by county, and work-related injury. Due to inconsistencies in reporting, caution should be exercised in interpretation of death rates for work-related injuries.

Iowa has also printed a *Healthy Iowans 2000* plan with goals and objectives covering twenty-two subject areas. A progress report, “Healthy Iowans 2000: How Far Have We Come?” is available on the Iowa Department of Public Health website: www.idph.state.ia.us, under Resources, Publications, Data. The Healthy Iowans 2010 plan also is available on the website. For a hard copy, call (515) 281-4348 or send a request to llex@idph.state.ia.us.

Health Status Indicator Statistics

Health Status Indicator	Iowa		National	
	1987	1999	Revised 1987	Year 2000 Objective
1. Infant Mortality, per 1,000 live births	9.1	5.7	10.1	7.0
Death rates for:				
2. Motor vehicle crashes ¹	17.3	17.3	19.2	14.2*
3. Work-related injury ²	2.9	3.0	2.3 (1986)	2.1* ³
4. Suicide ¹	12.5	9.8	11.7	10.5
5. Lung cancer ¹	33.2	32.3	38.5	42.0
6. Female breast cancer ¹	22.8	17.3	23.0	20.6
7. Cardiovascular disease ¹	195.5	142.1	210.6	NA
Heart Disease ¹	166.0	109.3	169.6	130.0*
Stroke ¹	30.4	23.6	30.4	20.0
8. Homicide ¹	2.0	2.0	8.5	7.2
9. All Causes ¹	470.2	417.9	535.5	475.0*
Reported incidence of:				
10. AIDS cases ²	1.3	3.0	8.7	36.3
11. Measles (total cases) ²	0	0	3,058	0
12. Tuberculosis ²	1.6	2.0	9.1 (1988)	3.5
13. Primary and secondary syphilis ²	0.9	0.3	18.1 (1989)	10.0
Indicators of risk:				
14. Birthweight <2500 grams as a percent of live births	5.1	6.2	6.9	5.0

Marriage of Longest Duration Ending in a Divorce: 56 years			

Charts

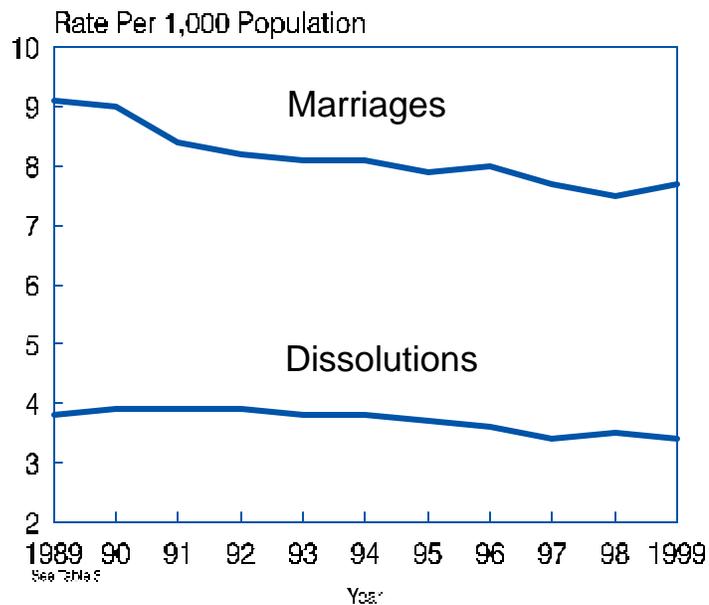

Figure 1: Live Births and Deaths
1989-1999 Resident Data

In 1999, the live birth rate increased slightly to 13.1 from 13.0 per 1,000 population last year. The current birth rate is comparable to the rate in 1994, but still low compared to the 14.2 rate for 1990.

The death rate stabilized at 9.9 in 1999. This is the highest death rate since 1993.

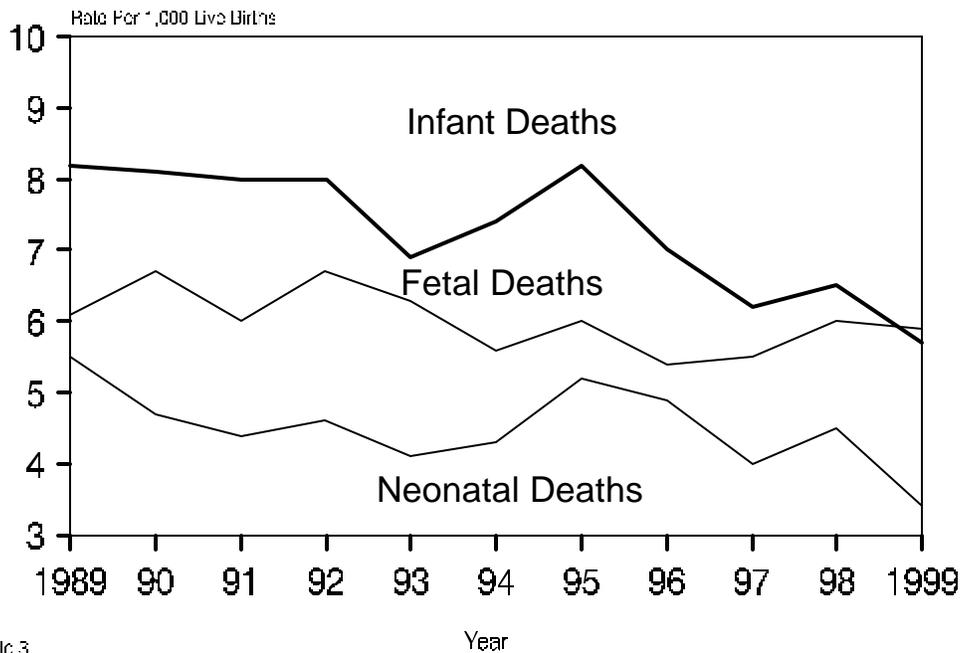

Figure 2: Marriages and Dissolutions
1989-1999 Occurrence Data

The current 7.7 marriage rate per 1,000 population is up, compared to 7.5 for 1998. This 1999 rate has dropped markedly from the 9.1 rate for 1989.

The 3.4 dissolution rate has decreased slightly from 3.5 in 1998, and is quite low in comparison to 3.9 in 1990-1992.

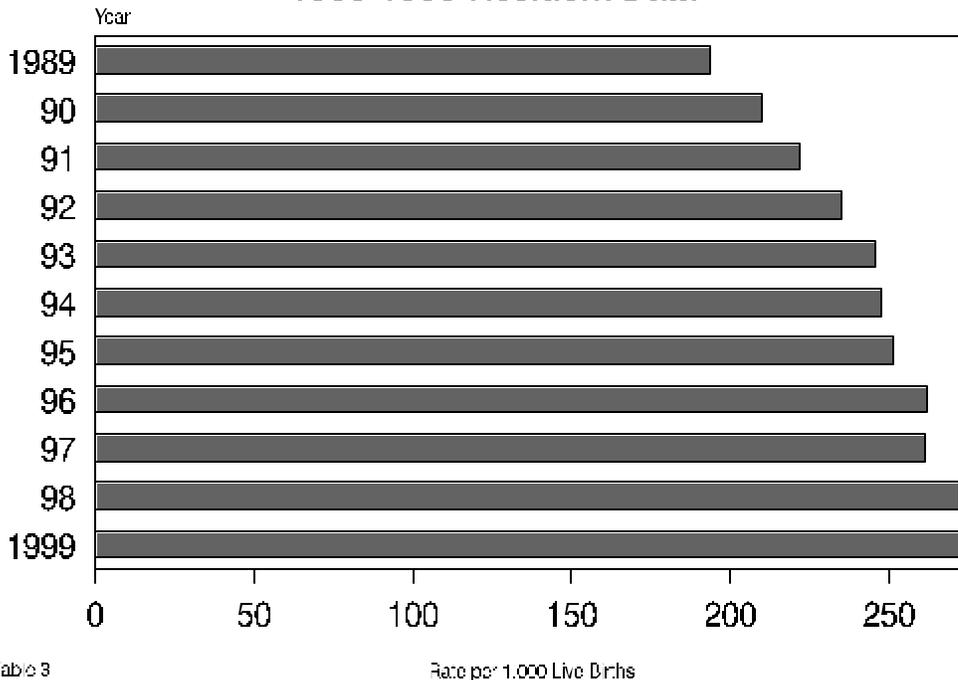

**Figure 3: Fetal, Neonatal, And Infant Deaths
1989-1999 Resident Data**

See Table 3

The infant death rate has decreased to a record low 5.7 per 1,000 live births in 1999; this is down from 6.5 a year ago. Moreover, the current infant death rate has dropped, compared to 8.2 for 1989. Fetal deaths have decreased in rate to 5.9 per 1,000 live births from 6.0 last year. Neonatal deaths dropped to 3.4 per 1,000 live births in 1999, this rate is also a record low rate.

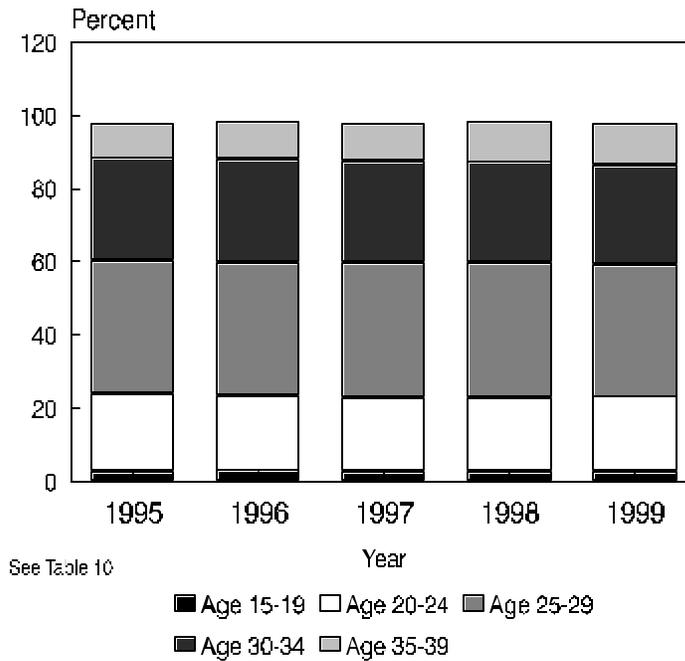

**Figure 4: Out of Wedlock Live Births
1989-1999 Resident Data**

See Table 3

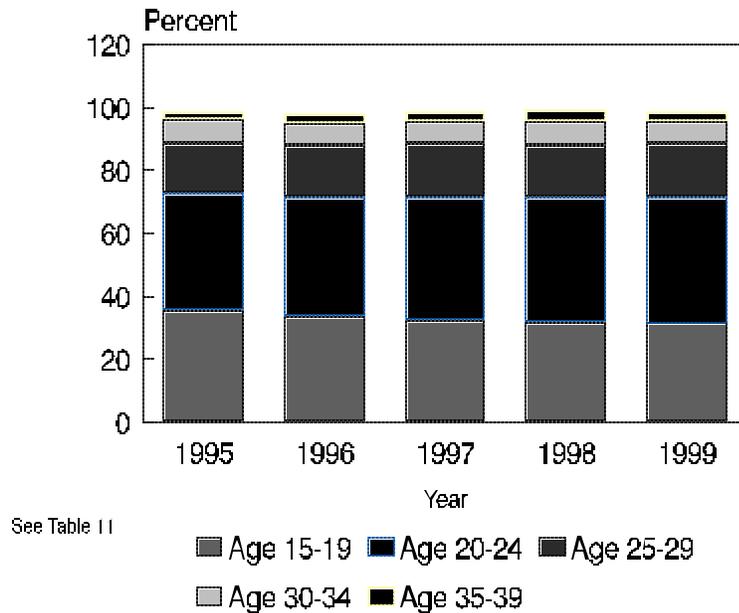

Out of wedlock live births rose this year to 275.1 per 1,000 live births from 272.4 in 1998; this is typical of continuing upward trend since 1974. The only break in the trend was a slight decrease in 1997.

**Figure 5: In Wedlock Live Births
By Age of Mother
1995-1999 Resident Data**

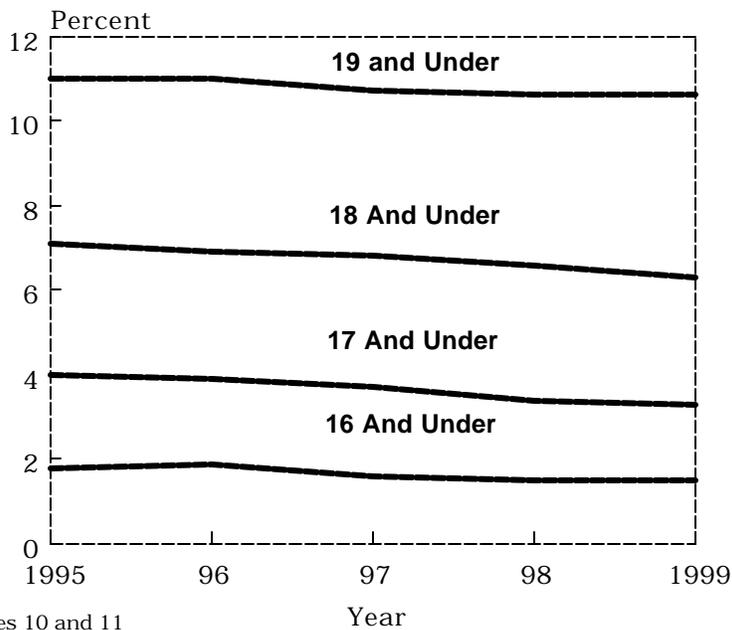

One of five in wedlock mothers in 1999 is aged 20-24; the current percentage is 20.4, which is up from 20.1 in 1998. The largest age group, 25-29, has declined to 36.0 percent of the in wedlock live births for this year from 37.1 percent last year.

**Figure 6: Out of Wedlock Live Births
By Age Of Mother
1995-1999 Resident Data**

The proportion of out of wedlock mothers aged 20-24 has steadily increased to 39.9 percent in 1999, compared with 37.6 for 1995. Currently 31.3 percent of the out of wedlock mothers are 15-19 years of age. This percentage has decreased continuously from 35.1 in 1995.

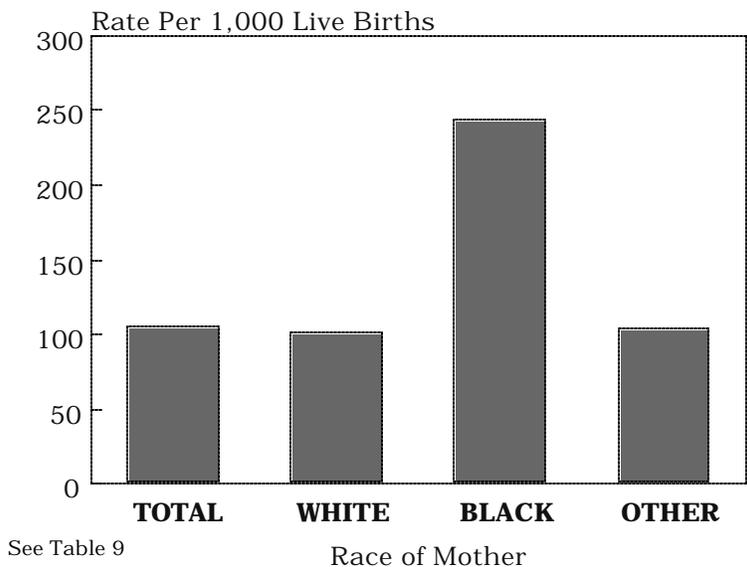

**Figure 7: Live Births to Teenage Mothers
As Percents of Total Live Births
1995-1999 Resident Data**

See Tables 10 and 11

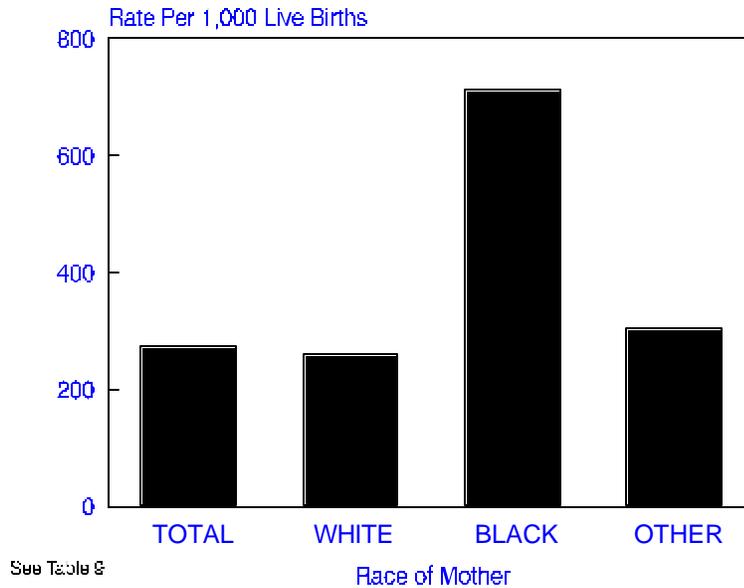

The proportion of live births born to mothers aged 19 and under remained at 10.6 percent of the total live births in 1999; a slight decline began in 1997.

**Figure 8: Mothers Under Age 20 by Race
1999 Resident Data**

See Table 9

**Figure 9: Out of Wedlock Live Births by Race
1999 Resident Data**

The Iowa African American out of wedlock live birth rate decreased in 1999 from 723.4 for 1998 to 712.3 per 1,000 live births. The rate for other races also decreased this year; it is 305.7 compared to 307.2. The out of wedlock rate among white mothers, in contrast, rose to 259.8 from 257.5 last year.

**Figure 10: Low Birth Weight Live Births as Percent of
Total Live Births Within Age Group of Mother
1997-1999 Resident Data**

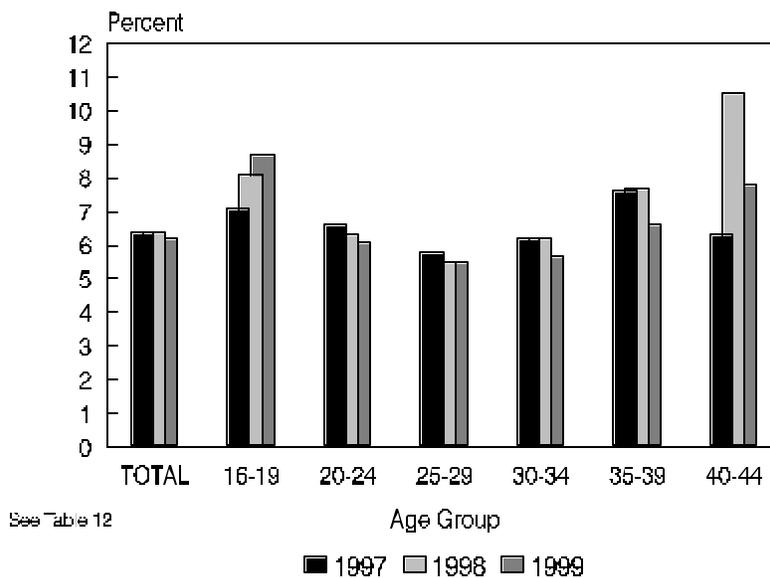

Figure 11: Low Birth Weight Live Births by Race
As Percents of Total Live Births
1999 Resident Data

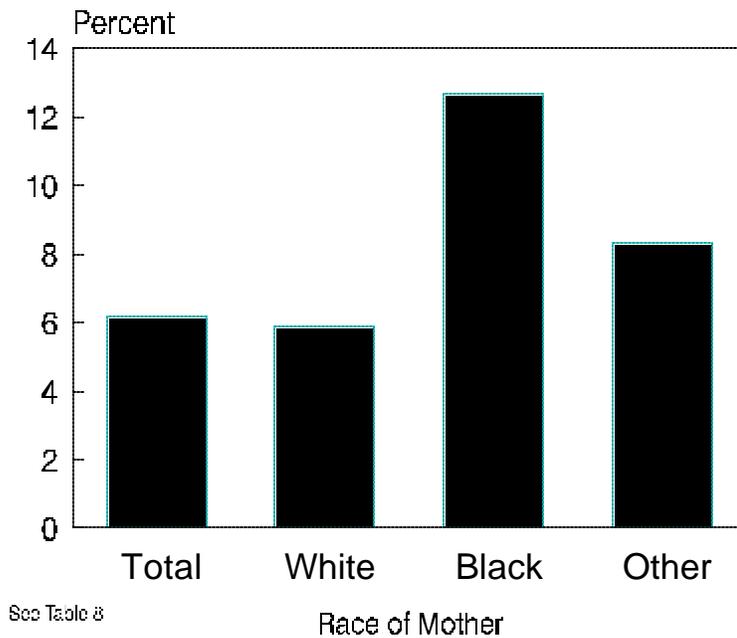

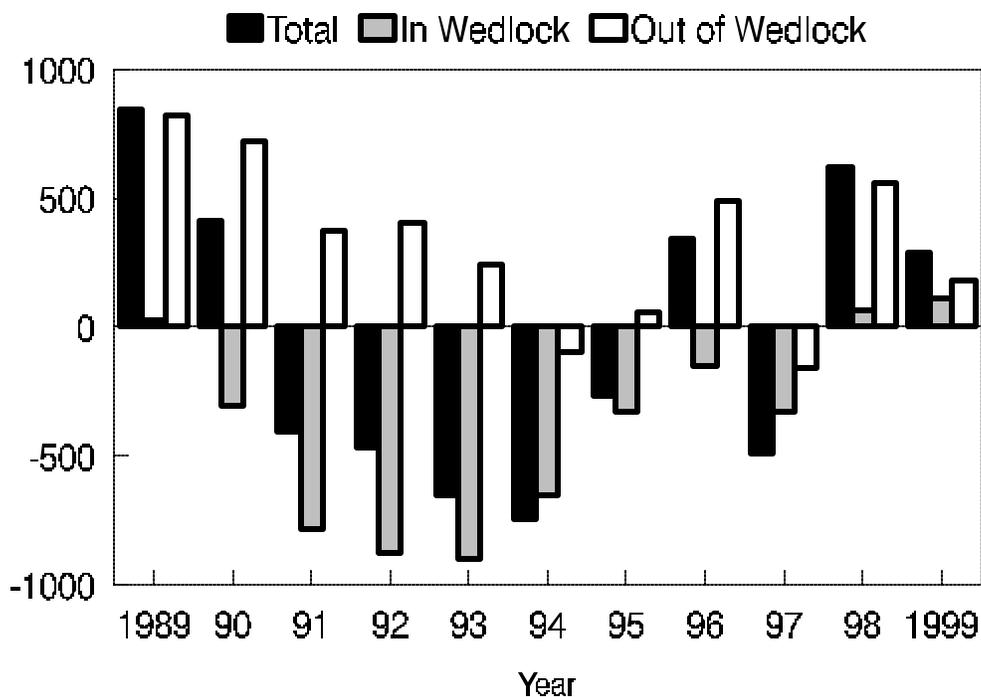

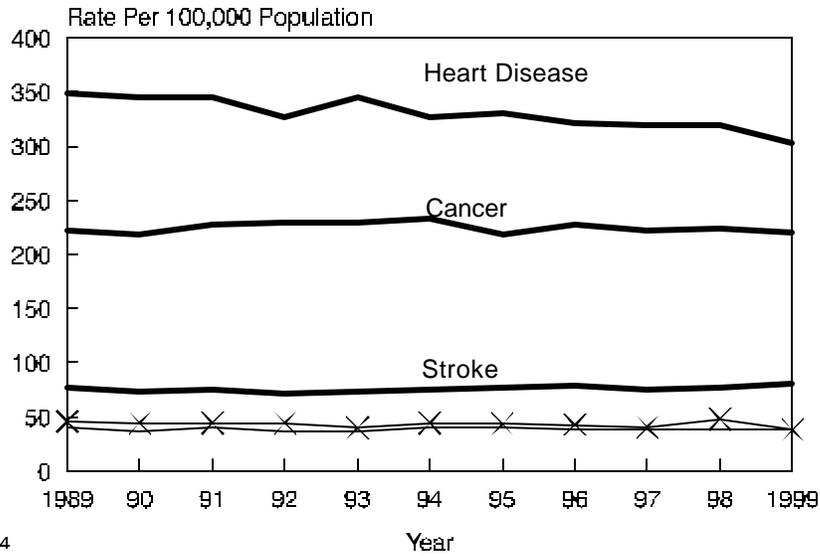

Figure 12: Change in Number of Live Births
By Marital Status
1989-1999 Resident Data

**Figure 13: Rates For Selected Causes Of Death
1989-1999 Resident Data**

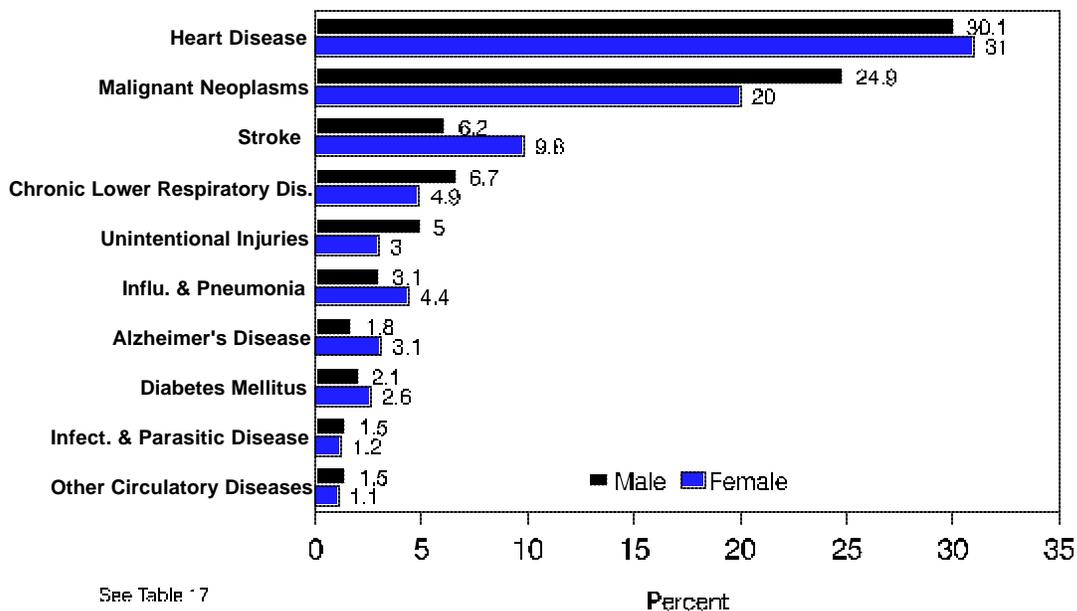

See Table 14

— Heart Disease — Cancer — Stroke
 — Unintentional Injuries × Influenza & Pneumonia

While heart disease is the leading cause of death in the state, the rate has steadily declined since 1995. The cancer rate has increased slowly over time. The 1999 heart disease death rate is 302.2 per 100,000 population; the cancer rate is 220.7. These two categories contribute over 50 percent of the deaths in Iowa each year.

**Figure 14: Ten Leading Causes of Death
As Percents Of all Deaths By Gender
1999 Resident Data**

See Table 17

Figure 15: Leading Causes of Death by Age Group 1999 Resident Data

From age 1 through age 44, the leading cause of death in Iowa is unintentional injuries (accidents). From age 45 to age 65, the leading cause of death is cancer; heart disease is the leading cause after age 65.

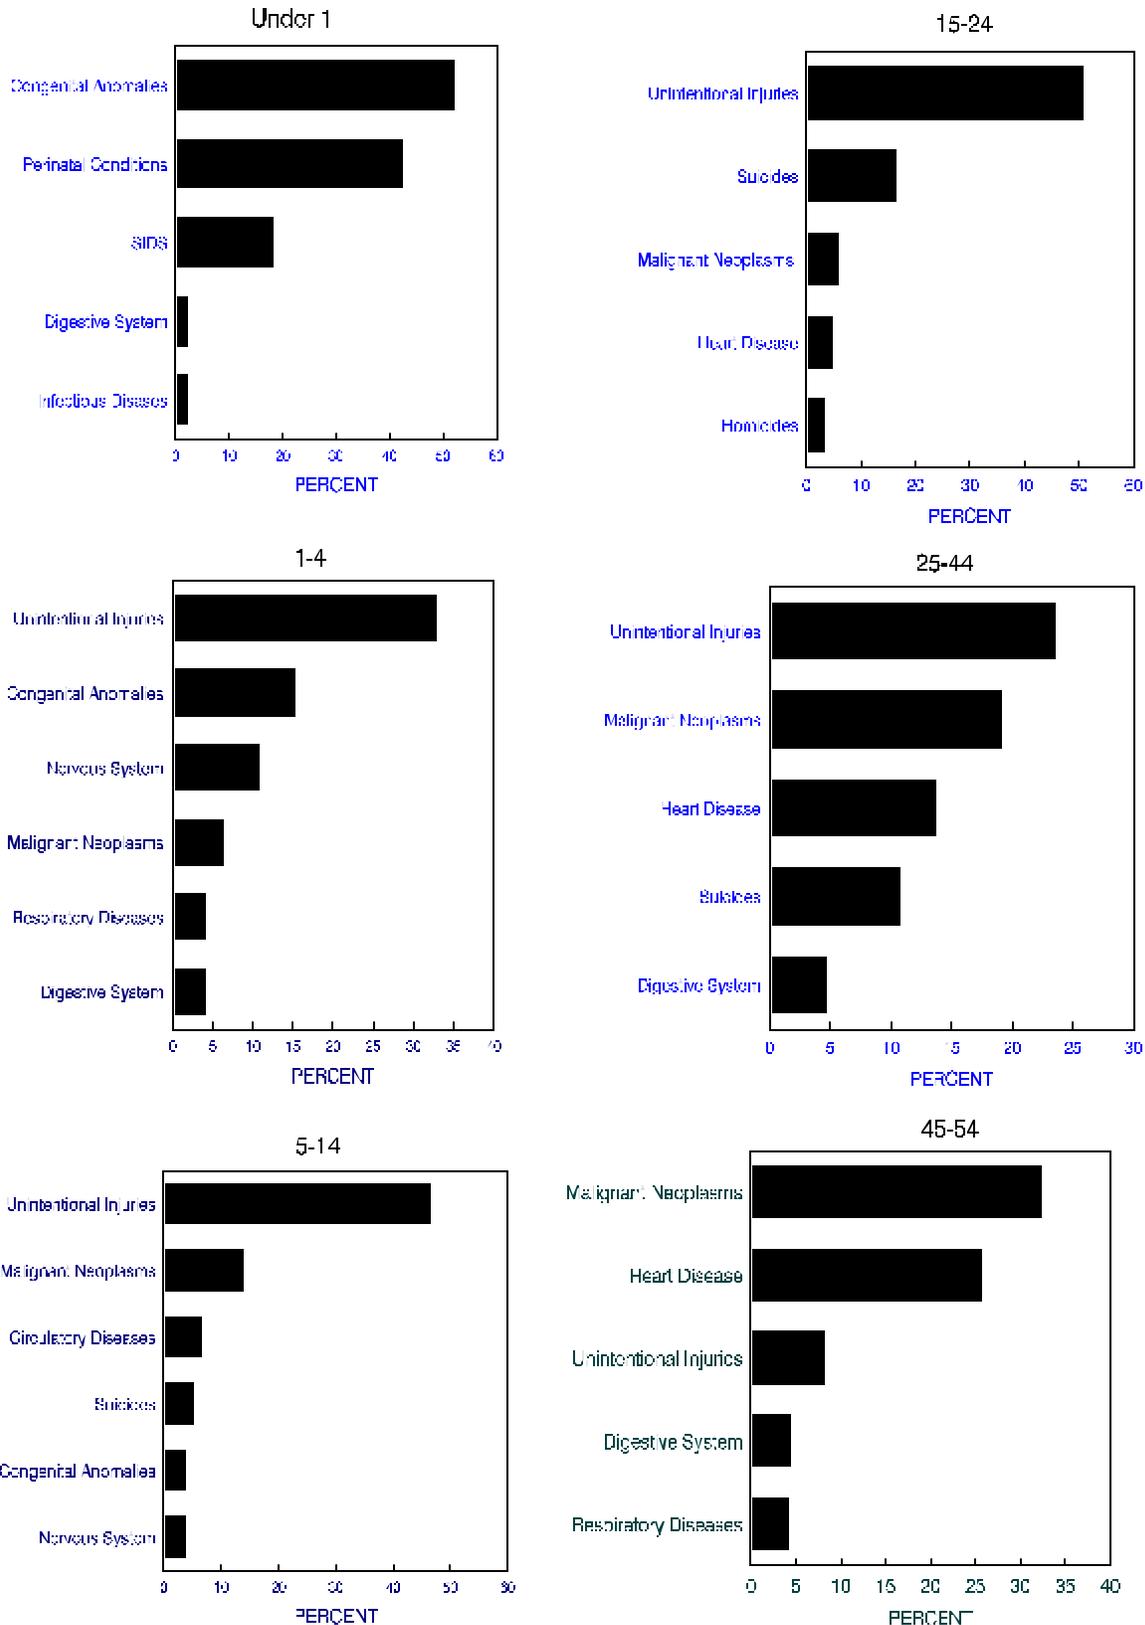

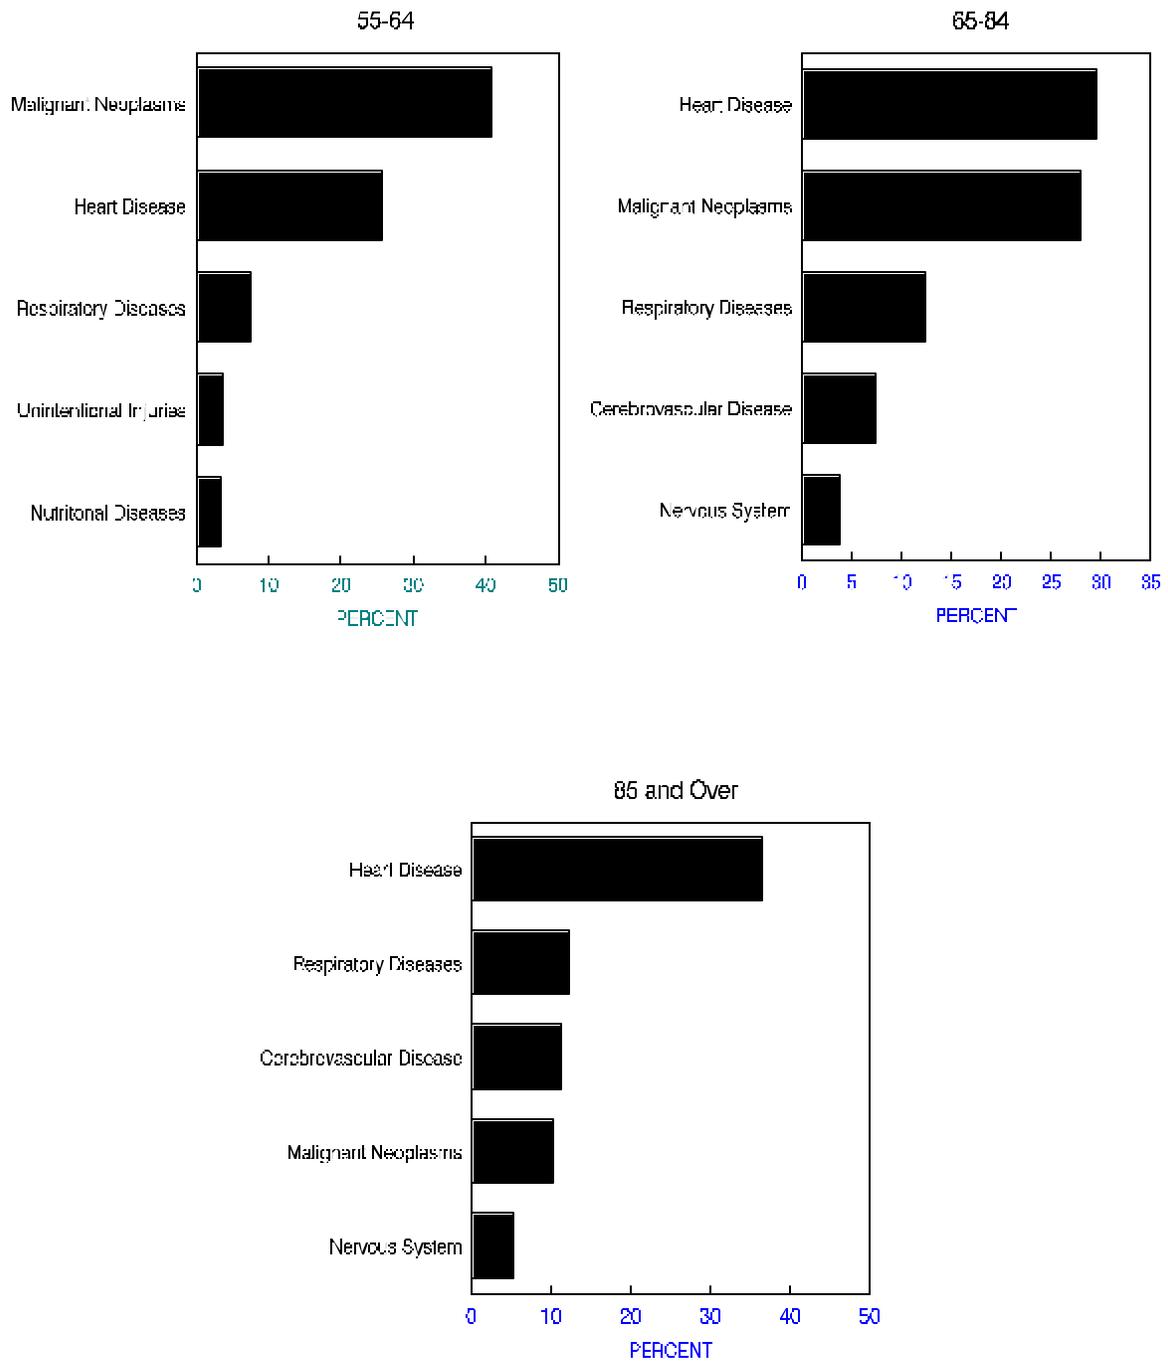

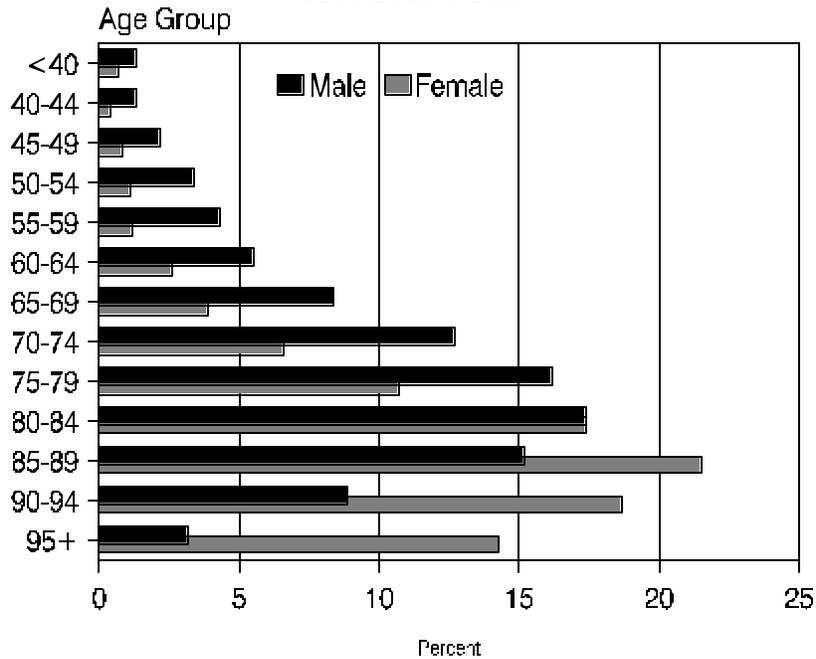

Figure 15 (cont.): Leading Causes of Death by Age Group
1999 Resident Data

See Table 16

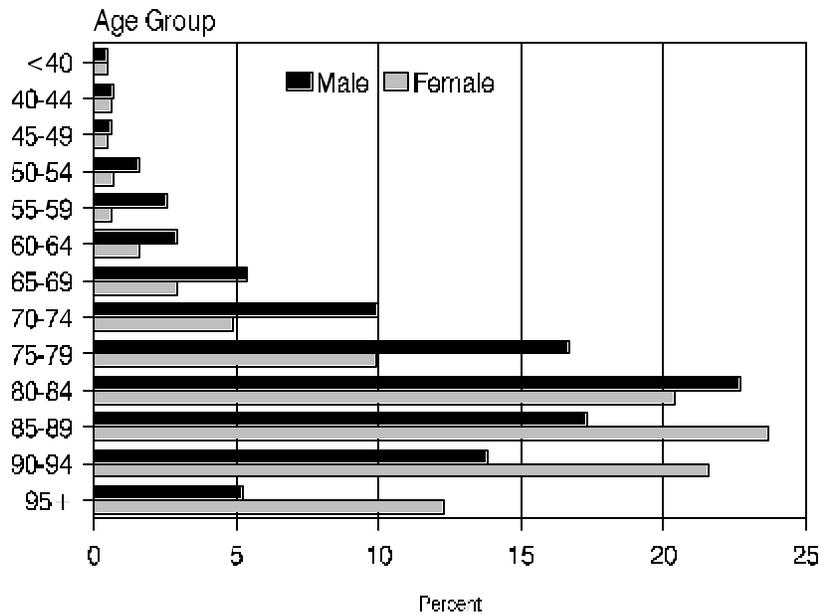

Figure 16: Heart Disease Deaths By Age and Sex
Percent Distribution
1999 Resident Data

See Table 18

More lowans die from heart disease than any other cause. While more women die of heart disease than men, these deaths tend to occur at older ages.

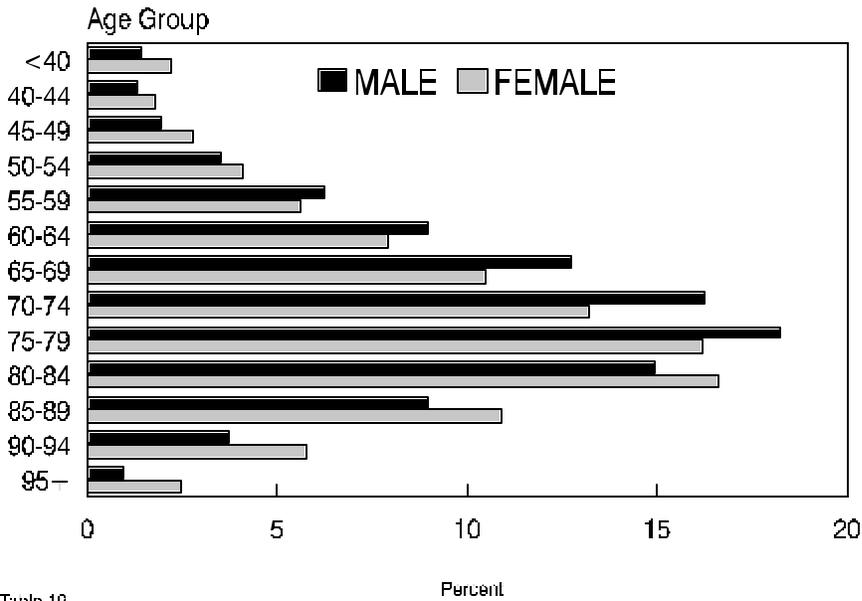

Figure 17: Cerebrovascular Disease Deaths By Age and Sex
Percent Distribution
1999 Resident Data

See Table 22

Cerebrovascular disease (stroke) affects "older" lowans more than any other leading cause of death; nearly 6 of 10 (59.0 %) of the male deaths are 80 and older. More than 3 out of 4 females (78.0 %) are 80 plus years of age.

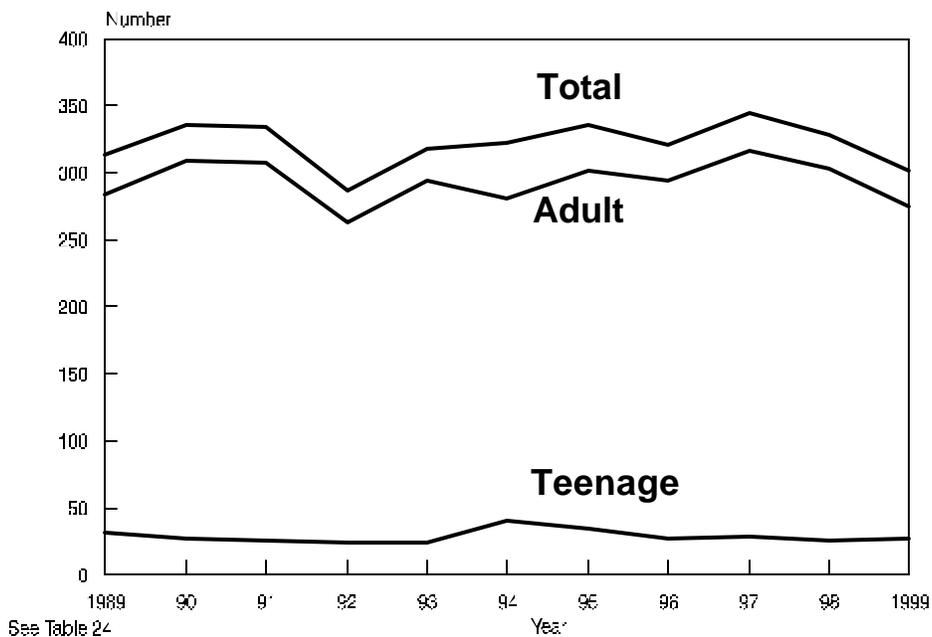

Figure 18: Cancer Deaths By Age and Sex
Percent Distribution
1999 Resident Data

See Table 18

Iowa cancer deaths occur to females at a somewhat older age than to males. Nearly one of five females (19.2%) dies at age 85 or older; the percentage for males 85 plus is 13.8.

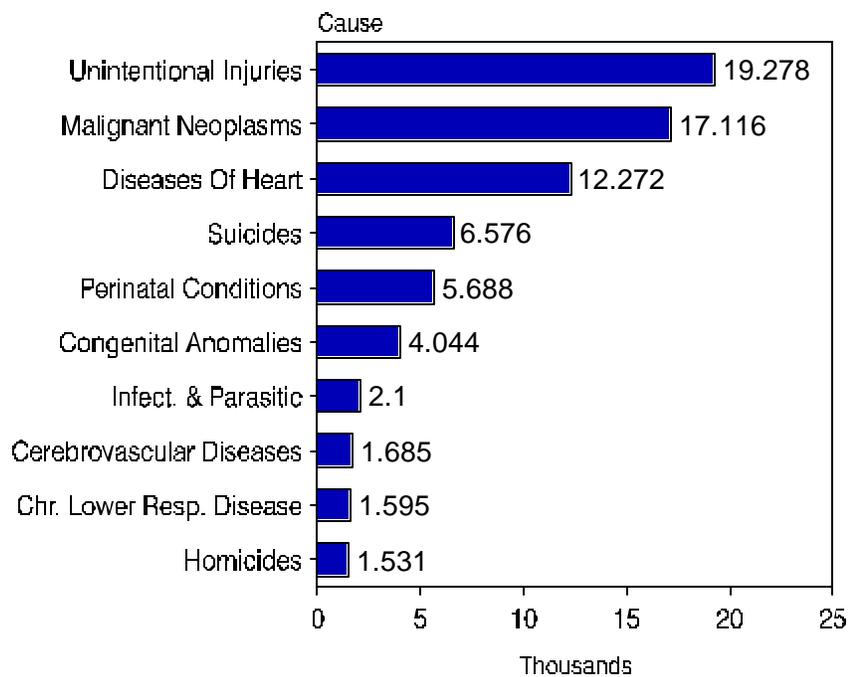

Figure 19: Teenage And Total Suicide Deaths
1989-1999 Resident Data

See Table 24

Total suicide deaths decreased to 302 this year from 328 for 1998. Teenage suicides increased to 27, compared to 25 last year.

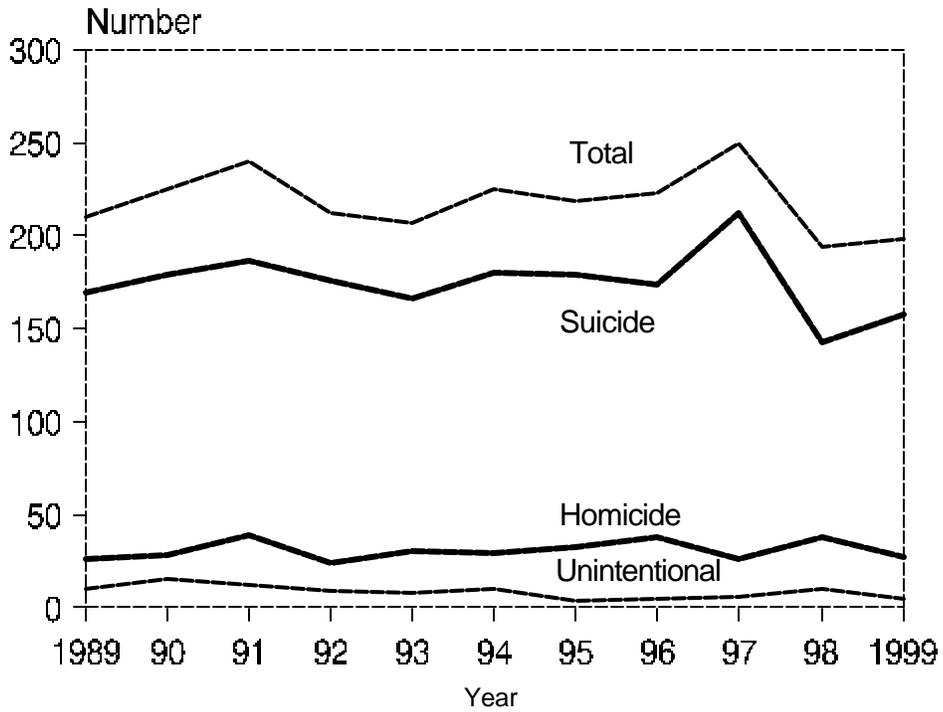

Figure 20: Ten Leading Causes of Death in Years of Potential Life Lost Before Age 65
1999 Resident Data

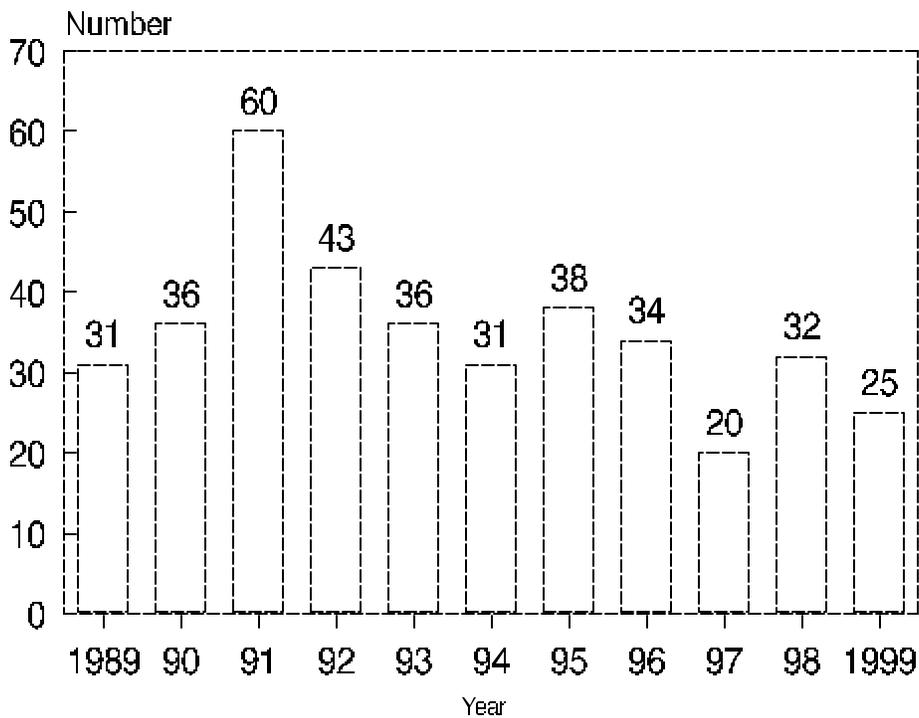

See Table 16

This chart shows the cumulative effect of "early" deaths by subtracting an individual's age at death from 65 and adding this number to others for the same cause of death. For example, an Iowa injury victim who dies at age 45, would contribute 20 years to the "All Injuries" total. This chart focuses attention on the causes of "early" mortality; effective prevention strategies are known, such as seatbelt use, good nutrition, exercise, and avoiding use of tobacco products.

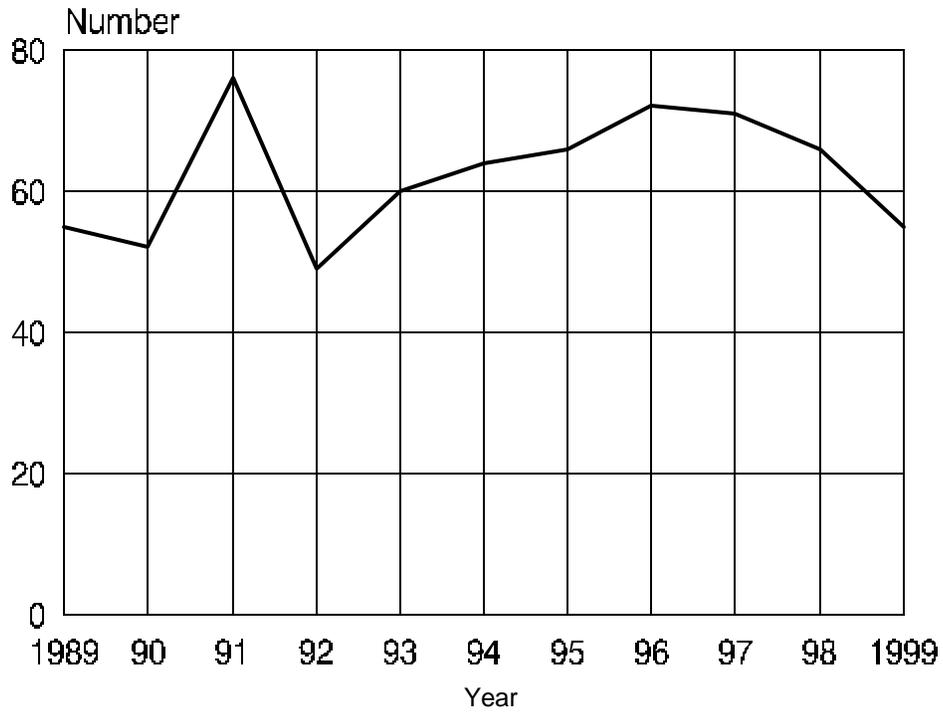

**Figure 21: Firearms Deaths By Type
1989-1999 Resident Data**

**Figure 22: Unintentional Drowning Deaths
1989-1999 Occurrence Data**

**Figure 23: Homicide Deaths
1989-1999 Resident Data**

**Figure 24: Unintentional Poisoning Deaths
1989-1999 Resident Data**

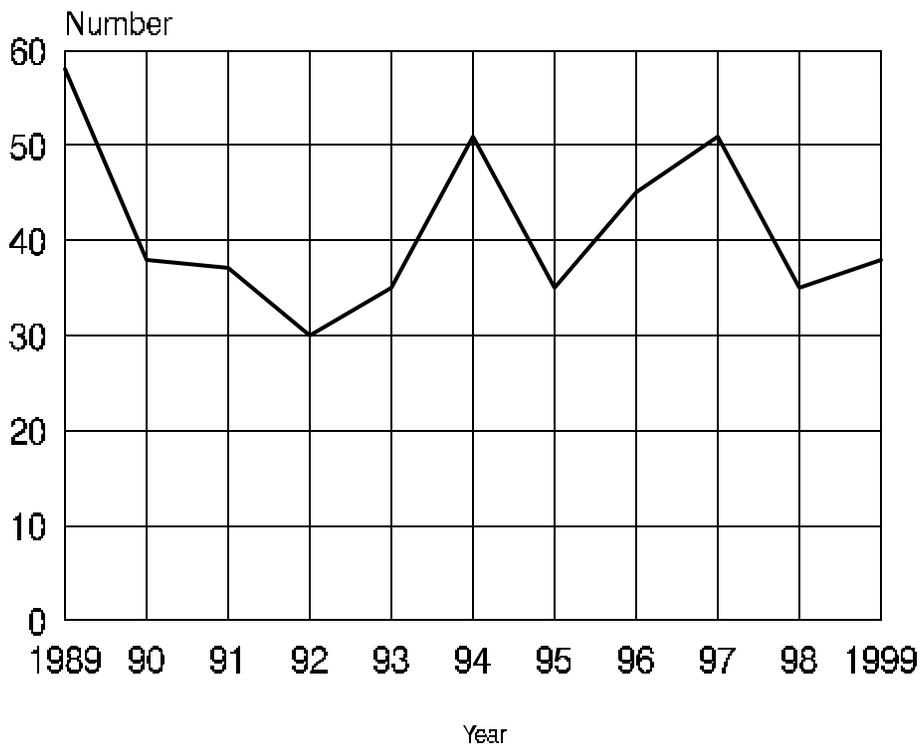

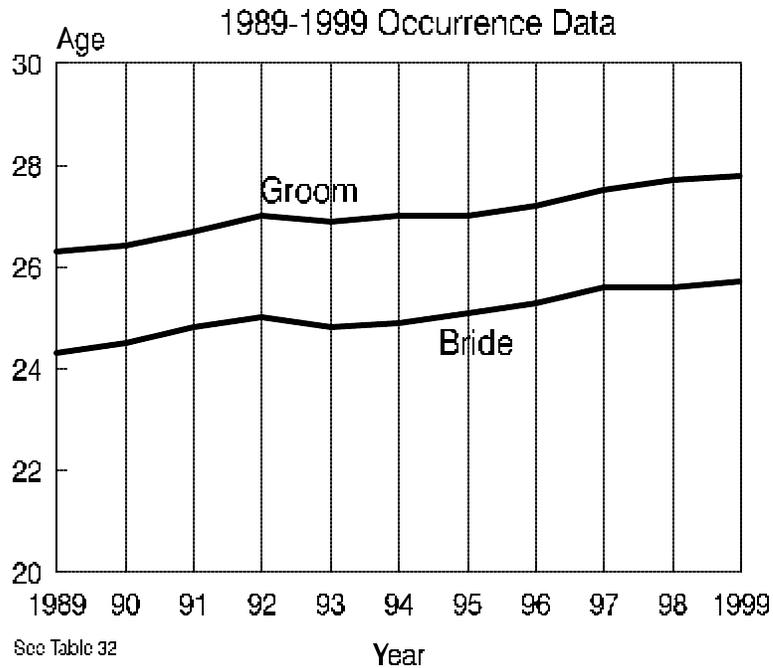

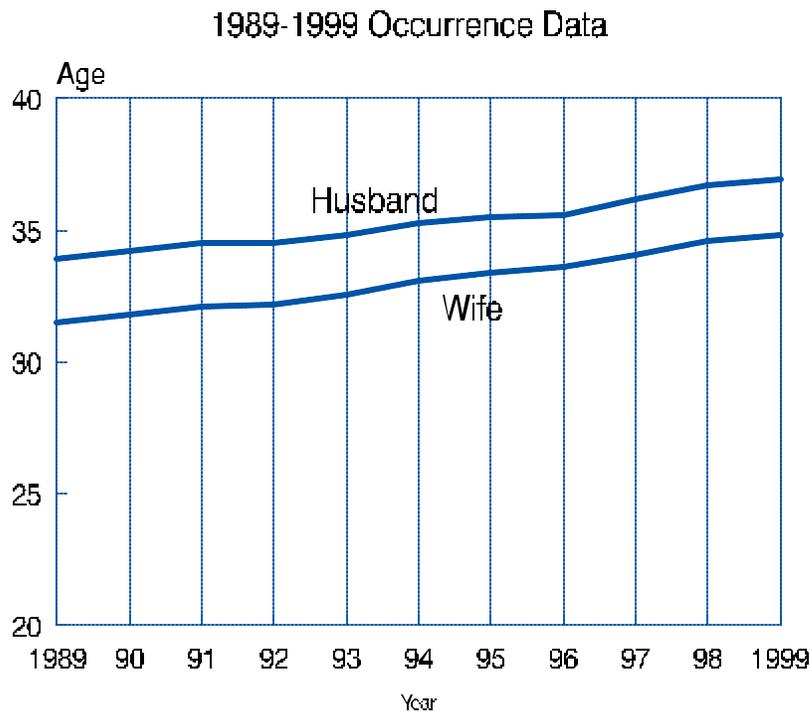

Figure 25: Median Age At Marriage

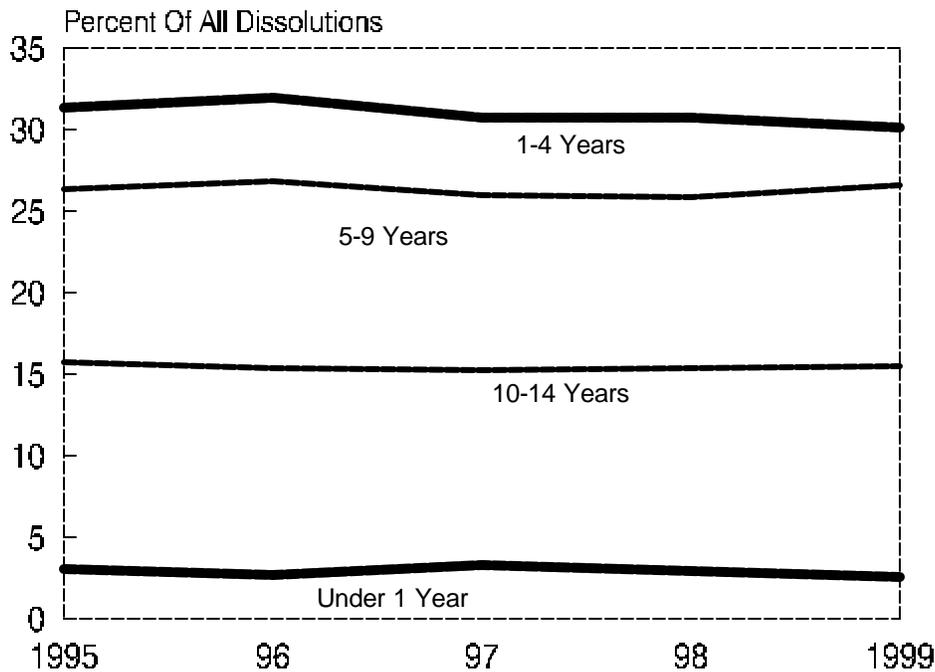

The median age at marriage for grooms has fluctuated upward to a current 27.8 from 26.3 in 1989. Concerning brides, the median age has increased continuously since 1993, from 24.8 to 25.6 in 1997-1998. Moreover, the 1999 median age is up to 25.7 for brides.

Figure 26: Median Age At Dissolution Of Marriage

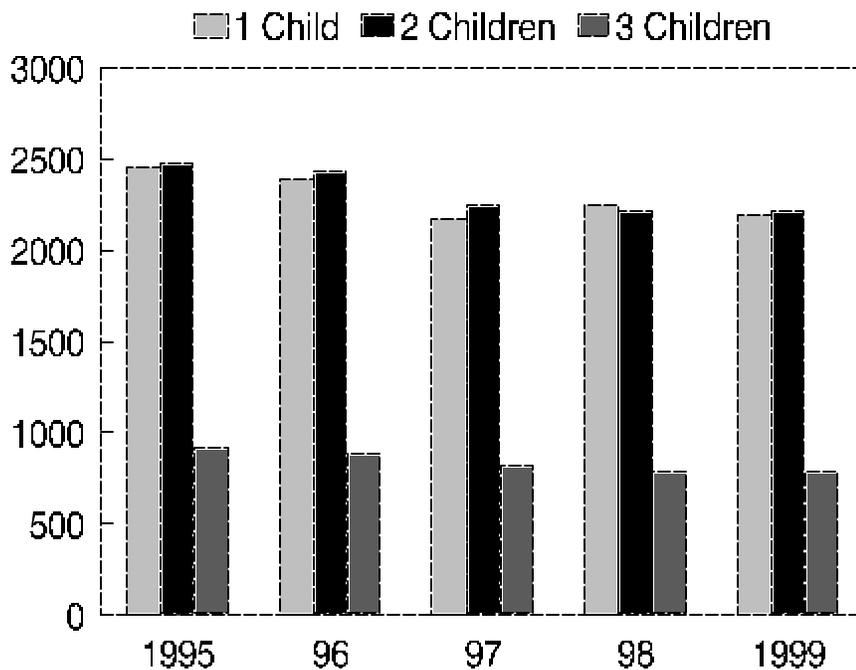

The trends in median age at dissolution of marriage pattern those of marriage, with the median age for both husband and wife increasing over the past 10 years. The age of husband has steadily increased, except for 1992; the age of wife has risen each year.

**Figure 27: Dissolutions With Selected Durations of Marriages
1995-1999 Occurrence Data**

**Figure 28: Number of Dissolutions With Children
Under 18 Years of Age Involved
1995-1999 Occurrence Data**

In 1999, 55.6% of divorces involved minor children. The number of dissolutions involving 1 child is down somewhat for 1999; the number with 2 or 3 children has increased this year.

Explanation of Vital Events Tables

Statistics are based on resident data.
The exceptions are marriages and dissolutions,
which are recorded in the county where the event occurred.

Rates for live births, deaths, marriages and dissolutions are
calculated per 1,000 estimated population; selected causes
of death rates are per 100,000 population.

Rates for out-of-wedlock live births, mothers under age 20, low
birthweight, live births, congenital malformations, fetal deaths,
neonatal deaths, perinatal deaths and infant deaths are per 1,000
live births. Maternal deaths are per 100,000 live births.
